Evaluation of Published Bioaccumulation Data for Per- and Polyfluoroalkyl Substances (PFAS) Across Aquatic Species

Lawrence P. Burkhard and Colleen M. Elonen US-Environmental Protection Agency, ORD, CCTE, GLTED, Duluth, MN, USA.

Lawrence Burkhard | Burkhard.lawrence@epa.gov | 218-529-5164

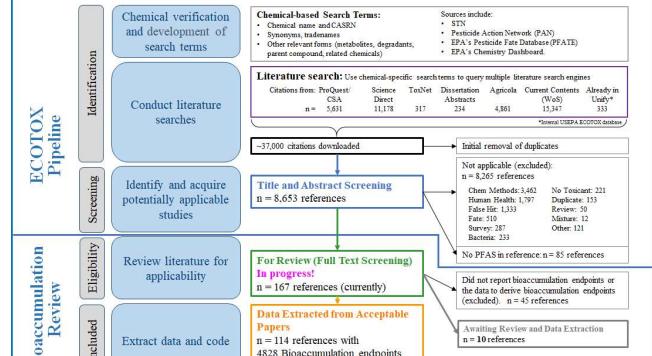

Introduction

PFAS chemicals are of concern to numerous stakeholders across the globe. A literature search for bioaccumulation information for PFAS compounds has been done, and coding of the data is in progress. This poster provides some initial results from the coding to date.

Literature Search Strategy

Based upon ECOTOX literature search pipeline: Systematic Review and Data Curation procedures.

ECOTOX Pipeline: Systematic Review/Data Curation

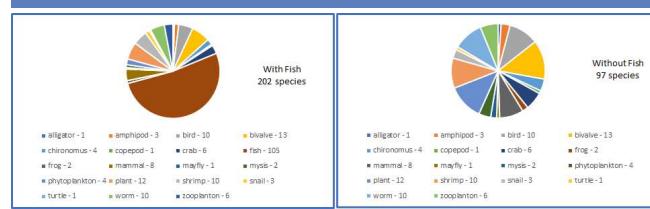

Coding Fields

- Chemical and CASRN
- Exposure data
- Kinetic uptake and depuration rates & half-life
- Tissues: whole body, fillet, muscle, gills, brain, ...
- Spatial-temporal level: Measured at Fishbase trophic level estimates
- Endpoints: BCF, BAF (lab & field), BSAF (lab & field), BMF (lab & field), & TMF
- Mixture or single chemical exposure

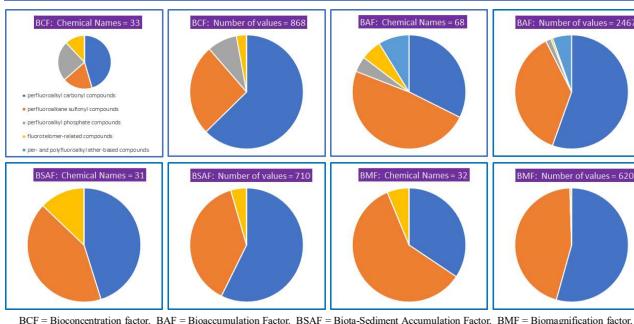

Results: Species Reported in the Literature

(biota - # of species)

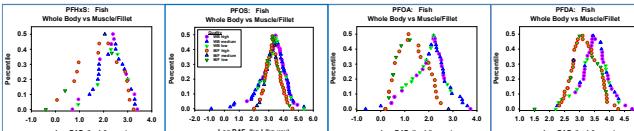

U.S. Environmental Protection Agency
Office of Research and Development

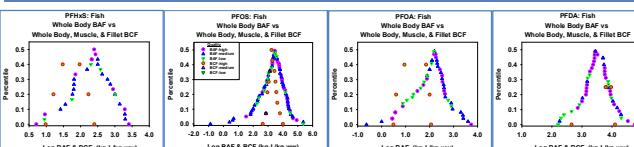

Results: Number of Chemicals & Bioaccumulation Values by OECD Category

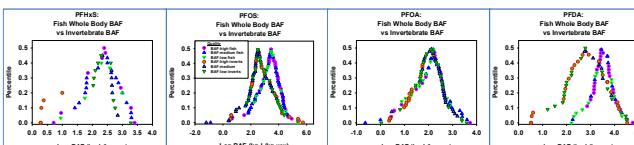

Results: Comparison of BAFs: Whole Body and Muscle/Fillet

Results: Comparison of Whole Body BAFs and Laboratory Measured BCFs

Results: Comparison of Whole Fish BAFs and Invertebrate BAFs

Symbols represent data from the literature. Different symbol shapes represent assessment of the quality of the published data as either of high (circles), medium (upright triangle) or low (inverted triangle) quality.

Conclusions

- Many species have measured bioaccumulation endpoints
- Most measurements are for carbonyl and sulfonyl compounds:
 - Primarily PFCAs and PFSAs (OECD structure category 102 and 202)
- Differences exist between BAFs for based on whole body and muscle/fillet residues
- Differences exist between BAFs for based on whole body and BCFs measured in the laboratory
- Differences exist between invertebrate and fish BAFs

Results: All Measured BAFs and BCFs (L/kg) Reported in the Literature

	Log BCF Whole Body (L/kg)	Log BCF Muscle/Fillet (L/kg)	Log BAF Whole Body (L/kg)	Log BAF Muscle/Fillet (L/kg)
