Overview

- Look into N214A/F amino acid change with DUET protein stability and Autodock Vina for both Bayer and ITASSER protein models
- Overview ITASSER process and scoring for homology modeling
- Compare ITASSER created models visually to Bayer created models
- Dock flupyradifurone and thiacloprid to models of interest

SeqAPASS: Sequence-based results

Amino Acid info

ID	Name	Side Chain	Size
A	Alanine	Aliphatic	89.094
C	Cysteine	Sulfur-Containing	121.154
D	Aspartic Acid	Acidic	133.104
E	Glutamic Acid	Acidic	147.131
F	Phenylalanine	Aromatic	165.192
G	Glycine	Aliphatic	75.067
H	Histidine	Basic	155.156
I	Isoleucine	Aliphatic	131.175
K	Lysine	Basic	146.189
L	Leucine	Aliphatic	131.175
M	Methionine	Sulfur-Containing	149.208
N	Asparagine	Amidic	132.119
P	Proline	Aliphatic	115.132
Q	Glutamine	Amidic	146.146
R	Arginine	Basic	174.203
S	Serine	Hydroxylic	105.093
T	Threonine	Hydroxylic	119.119
U	Seleno-cysteine	Sulfur-Containing	168.064
V	Valine	Aliphatic	117.148
W	Tryptophan	Aromatic	204.228
X	Unknown	Unknown	-
Y	Tyrosine	Aromatic	181.191

N214F – Amidic to Aromatic AND MW diff. 33.073 g/mol
N214A – Amidic to Aliphatic AND MW diff. 43.025 g/mol

Question: Are mutations in structure destabilizing and consistent with sequence-based predictions?

Use DUET to explore mutations in protein structure

- **Need structural models**
  - **PDB**
  - **Point mutation**

Protein stability of N214A/F of Apis mellifera CYP9Q3

I-TASSER
Protein Structure & Function Predictions

mCSM Predicted Stability Change (ΔΔG):
-0.643 Kcal/mol (*Destabilizing*)

SDM Predicted Stability Change (ΔΔG):
0.92 Kcal/mol (*Stabilizing*)

DUET Predicted Stability Change (ΔΔG):
-0.181 Kcal/mol (*Destabilizing*)

Mutation:

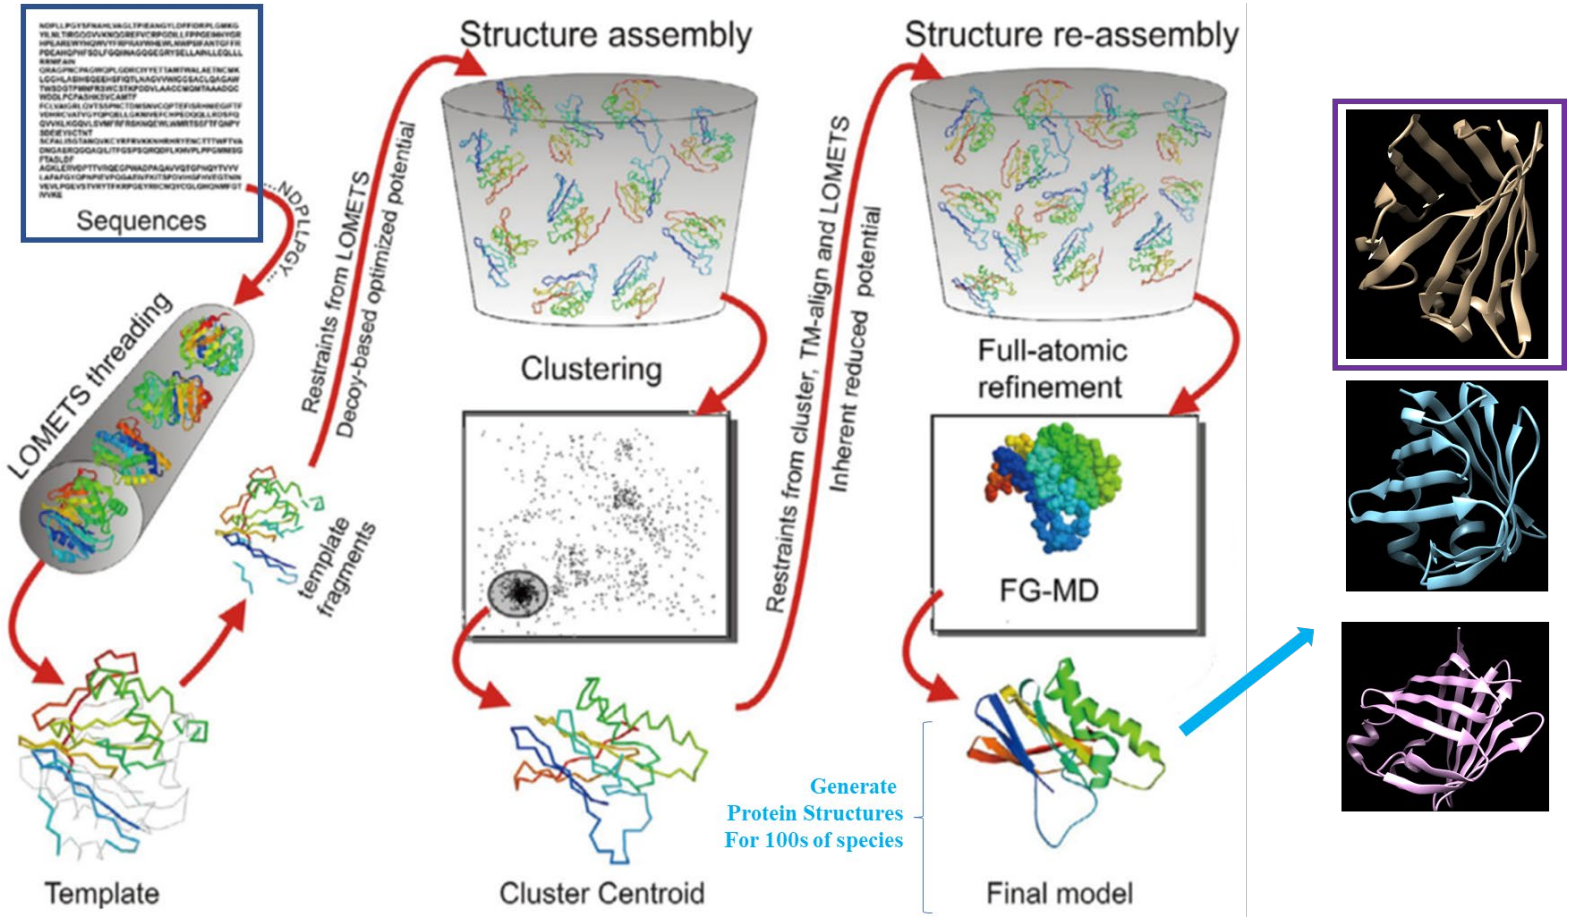
Creating homology models with the Iterative Threading ASSEmbly Refinement (ITASSER) tool



Models created for each species

- Apis mellifera
  - CYP9Q3 with restraint 1TQN (ITASSER)
  - CYP9Q3 with no restraint (ITASSER)
  - CYP9Q3 with no restraint (Phyre2)
- Bombus terrestris
  - CYP9Q4 with restraint 1TQN (ITASSER)
  - CYP9Q4 with no restraint (ITASSER)
  - CYP9Q4 with no restraint (Phyre2)
- Osmia bicornis
  - CYP9BU1 with restraint 1TQN (ITASSER)
  - CYP9BU1 with no restraint (ITASSER)
  - CYP9BU1 with no restraint (Phyre2)

Comparing model scores

ITASSER Scoring text

- Correlation coefficient of C-score of the first model with TM-score to the native structure is 0.91, while the coefficient of C-score with RMSD to the native structure is 0.75
- TM-score >0.5 indicates a model of correct topology and a TM-score<0.17 means a random similarity
- A higher cluster density means the structure occurs more often in the simulation trajectory and therefore signifies a better-quality model

Project	Protein	Template	Species	Model #	Cscore	TM-Score	RMSD	Decoys	Density
CYP9Q	CYP3A4	1TQN	Human	1 of 5	1.09	0.86+-0.07	5.0+-3.2	3316	0.556
CYP9Q	CYP9Q3	1TQN	Apis mellifera	1 of 5	1.01	0.85+-0.08	5.2+-3.3	4559	0.428

I-TASSER Protein Structure & Function Predictions

BAYER

EPA United States Environmental Protection Agency

Completed work recap and next possible steps…

- Minimize ITASSER structures to match Bayer .min structures
- Look at superimposed positions for critical amino acids
- Dock flupyradifurone and thiacloprid to structures and determine docking scores
- Point mutate Bayer models and analyze docking scores of flupyradifurone and thiacloprid
- Create homology models for other bee species of interest
  - Possible step
