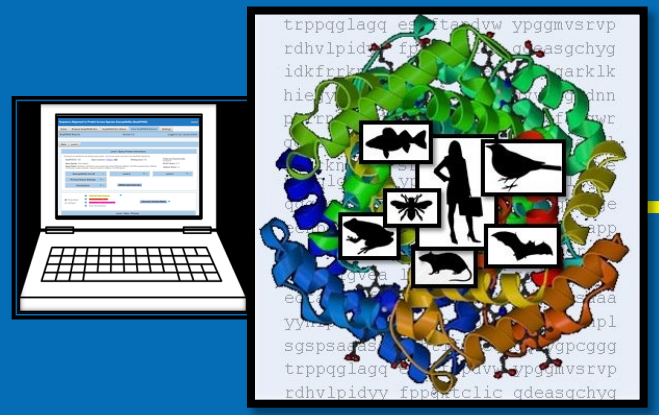
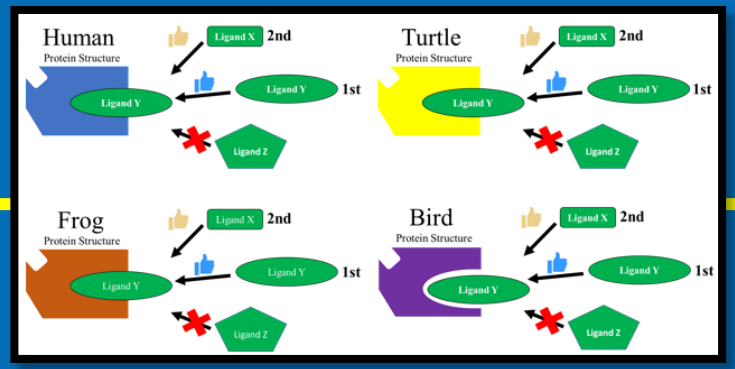
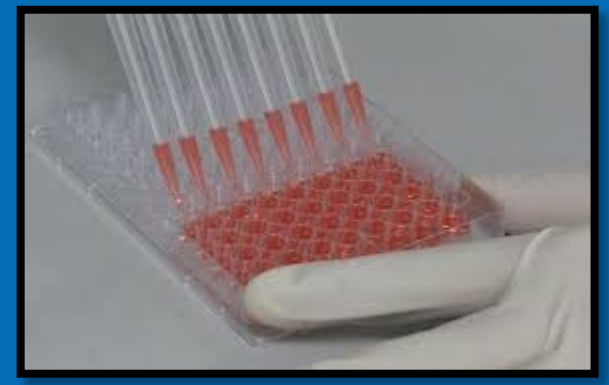
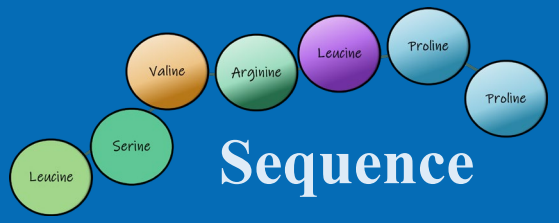
Advances in bioinformatics to improve cross species extrapolation of toxicity information for chemical safety evaluations

SeqAPASS v6

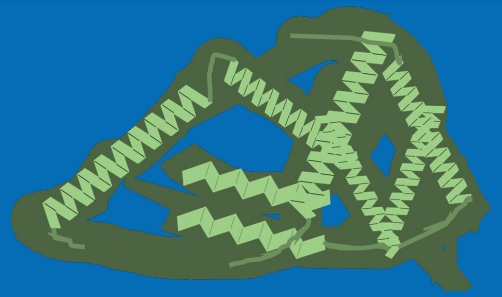








Sequence



Structure

Function

Presenter: Carlie A. LaLone, Ph.D.

March 2022

Office of Research and Development
Center for Computational Toxicology and Exposure, Great Lakes Toxicology and Ecology Division

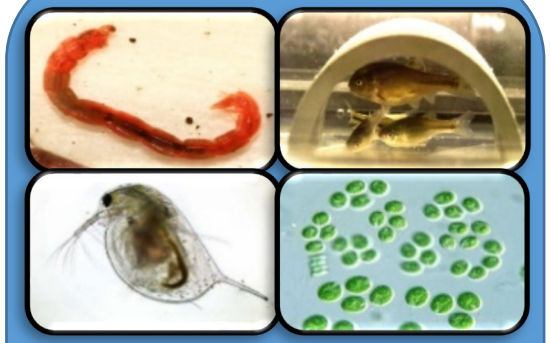
Overview

- Need for cross species extrapolation
- Bioinformatics to advance extrapolation
- The Sequence Alignment to Predict Across Species Susceptibility (SeqAPASS) tool
- Demonstrated applications
- Future vision for incorporating structural evaluations
- Bringing champions in the field together to advance the science for action through an international consortium

Toxicity Testing to Understand Chemical Safety

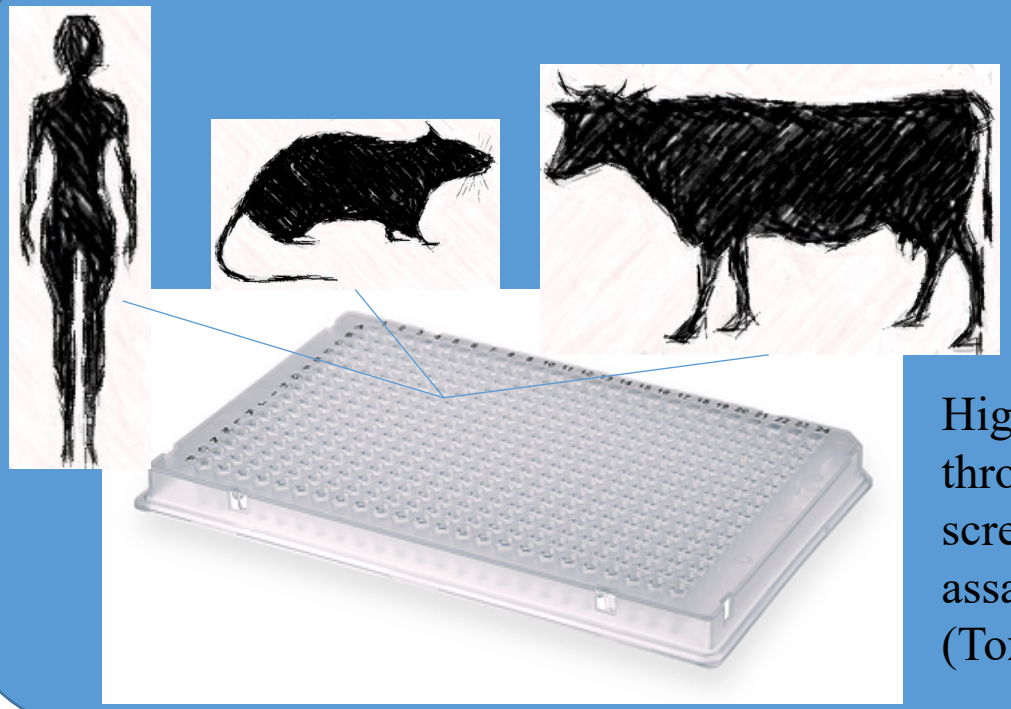
- **<u>US EPA Examples:</u>**
- *Clean Air Act*
- *Clean Water Act*
- *Resource Recovery Act*
- *Endangered Species Act*
- *Food Quality Protection Act*
- *Endocrine Disruptor Screening Program*
- *Federal Insecticide, Fungicide, and Rodenticide Act*
- *Frank R. Lautenberg Chemical Safety for the 21st Century Act*
- *Comprehensive Environmental Response, Compensation, and Liability Act*
- *Guidelines for Deriving Numerical National Water Quality Criteria for the Protection of Aquatic Organisms and Their Uses*

Need for Advances in Species Extrapolation



High throughput transcriptomics

Whole organism toxicity testing



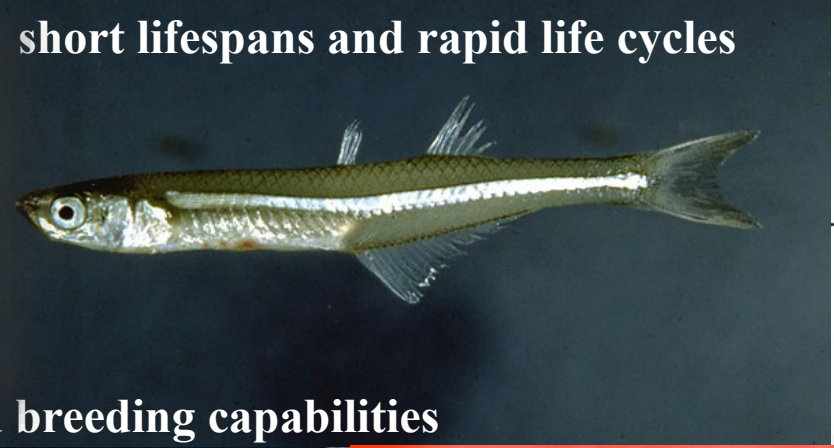
High-throughput screening assays (ToxCast)

Define the taxonomic domain of applicability in AOP development

Use of model organisms as surrogates representing the diversity of species in the environment

cheap and readily available

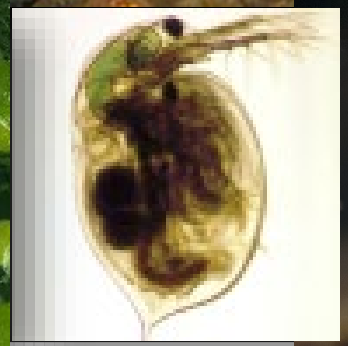
short lifespans and rapid life cycles



easy maintenance and good breeding capabilities

ability to control diet and surroundings

requires least space and time-consuming care



Species Extrapolation

What is it?

- Using existing knowledge about one species to estimate, predict, project, or infer the effect, impact, or trajectory of another species
    - For chemical safety typically dealing with toxicity

Why is it important:

- Limited or no toxicological data for the animal or plant species of interest – reliance on surrogate (model organisms)
    - Impractical to generate new data for all species
- Testing resources are limited
    - International interest to reduce animal use
    - Ever-increasing demand to evaluate more chemicals in a timely and sometimes expedited manner
- Sensitivity of species must be estimated based on scientifically-sound methods of cross-species extrapolation
    - Immense diversity of species in the wild
    - Important challenge for species listed under the Endangered Species Act

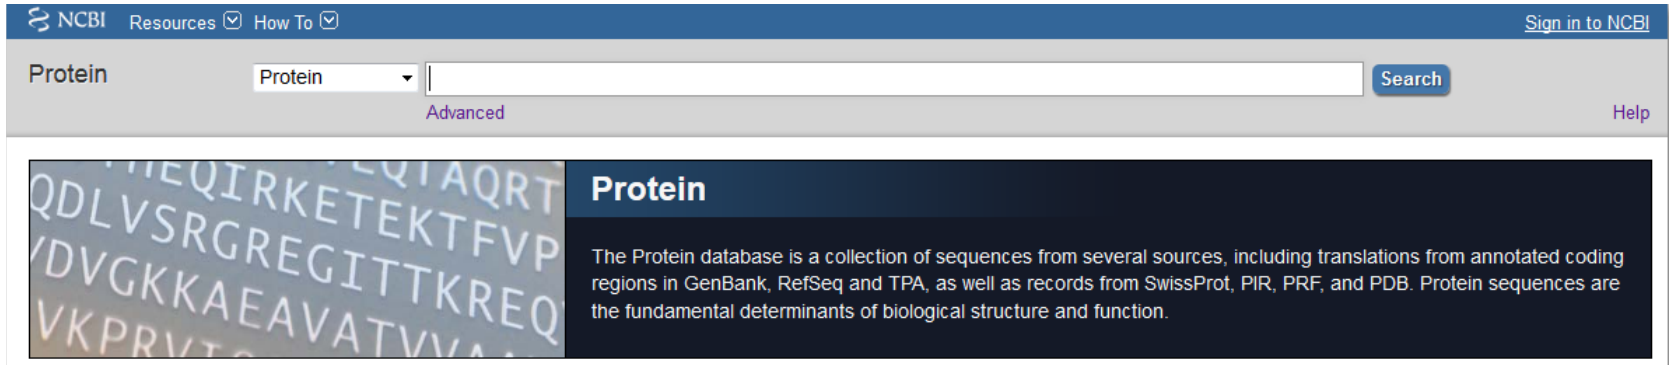
Where could we begin in understanding species similarities and differences?

Look for existing, expanding data that does not require the destruction of live organisms

Sequence and structural data: New tools and technologies have emerged

- Improved sequencing technologies
- Large databases of sequence data

NCBI: 224,211,842 Proteins representing 117,030 Organisms



EPA United States Environmental Protection Agency

Bioinformatics

- Combines mathematics, information science, and biology to **answer biological questions**

- Developing methodology and analysis tools to **explore large volumes of biological data**
  - Query, extract, store, organize, systematize, annotate, visualize, mine, and interpret complex data
    - Usually **pertains to DNA and amino acid sequences**

Let the computers do the work

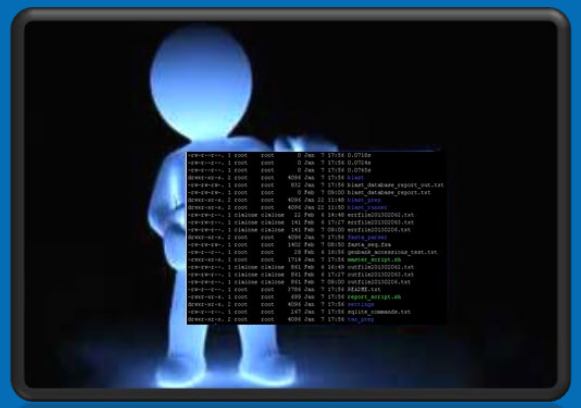
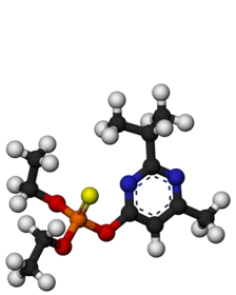
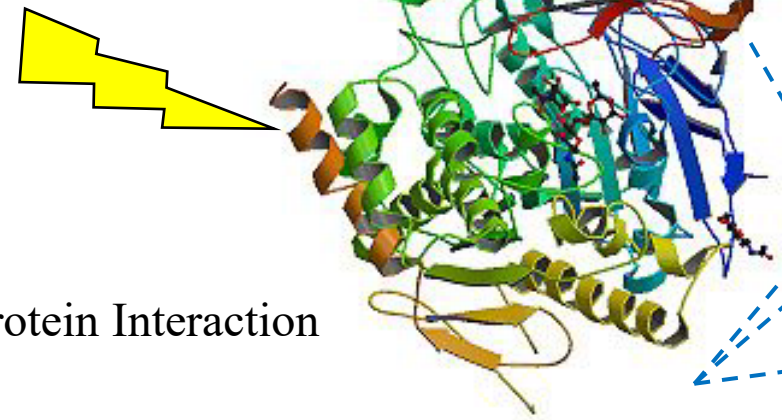
Sequence Alignment to Predict Across Species Susceptibility (SeqAPASS)



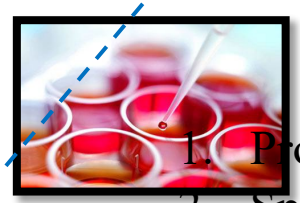
What information is required for a SeqAPASS query?





Chemical-Protein Interaction

Knowledge of a sensitive or targeted species

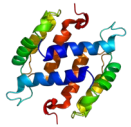


Knowledge of the model organism used in an *in vitro* assay

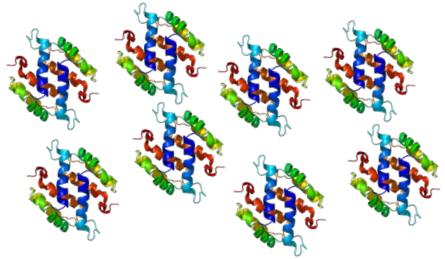
1. Protein
2. Species

Knowledge of the species for which the Key Event was developed

Chemical Molecular Target in Target Species



≅



Compare to Millions of Proteins From Thousands of Species

Greater similarity = Greater likelihood that chemical can act on the protein

Line of Evidence: Predict Potential Chemical Susceptibility Across Species

Flexible Analysis Based On Available Data

Level 1 Primary Amino Acid Sequence Alignments

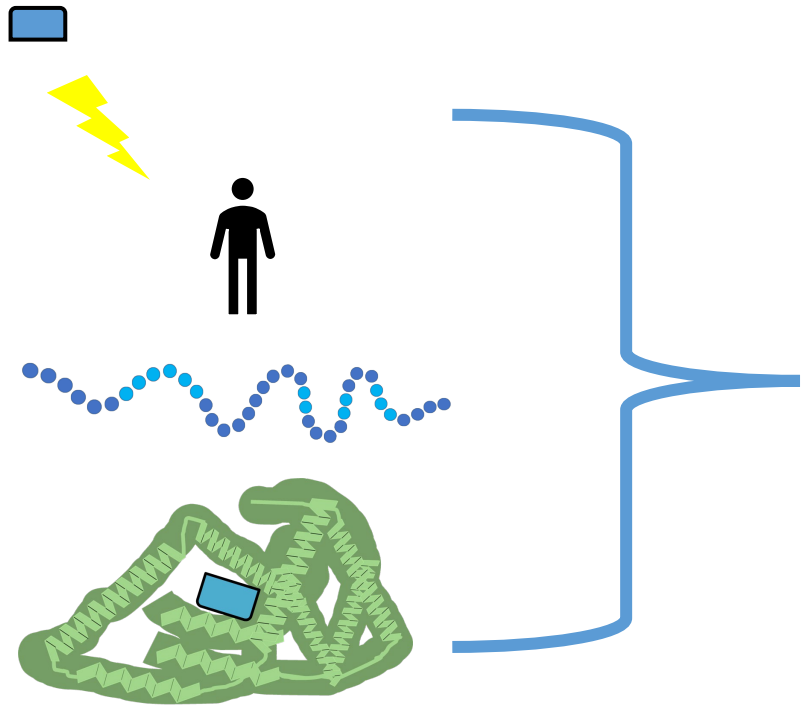
Level 2 Conserved Functional Domain Alignments

Level 3 Critical (Close Contact) Amino Acid Conservation

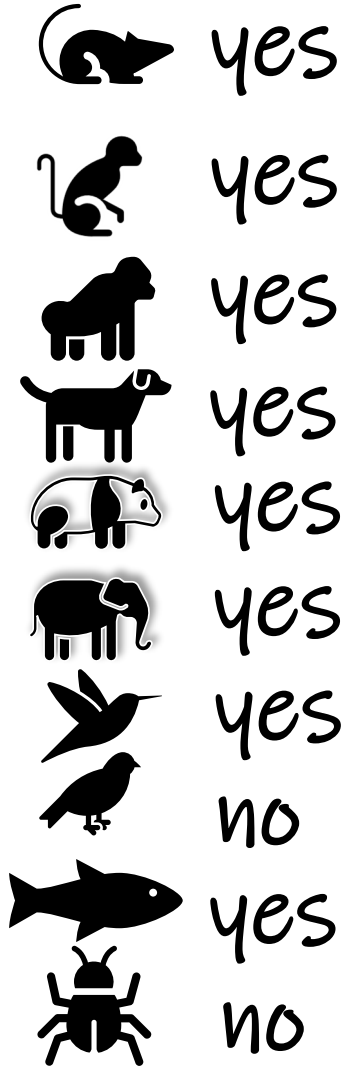
seqapass.epa.gov/seqapass/

Gather Lines of Evidence Toward Protein Conservation

SeqAPASS Predicts Likelihood of Similar Susceptibility based on Sequence Conservation:



yes

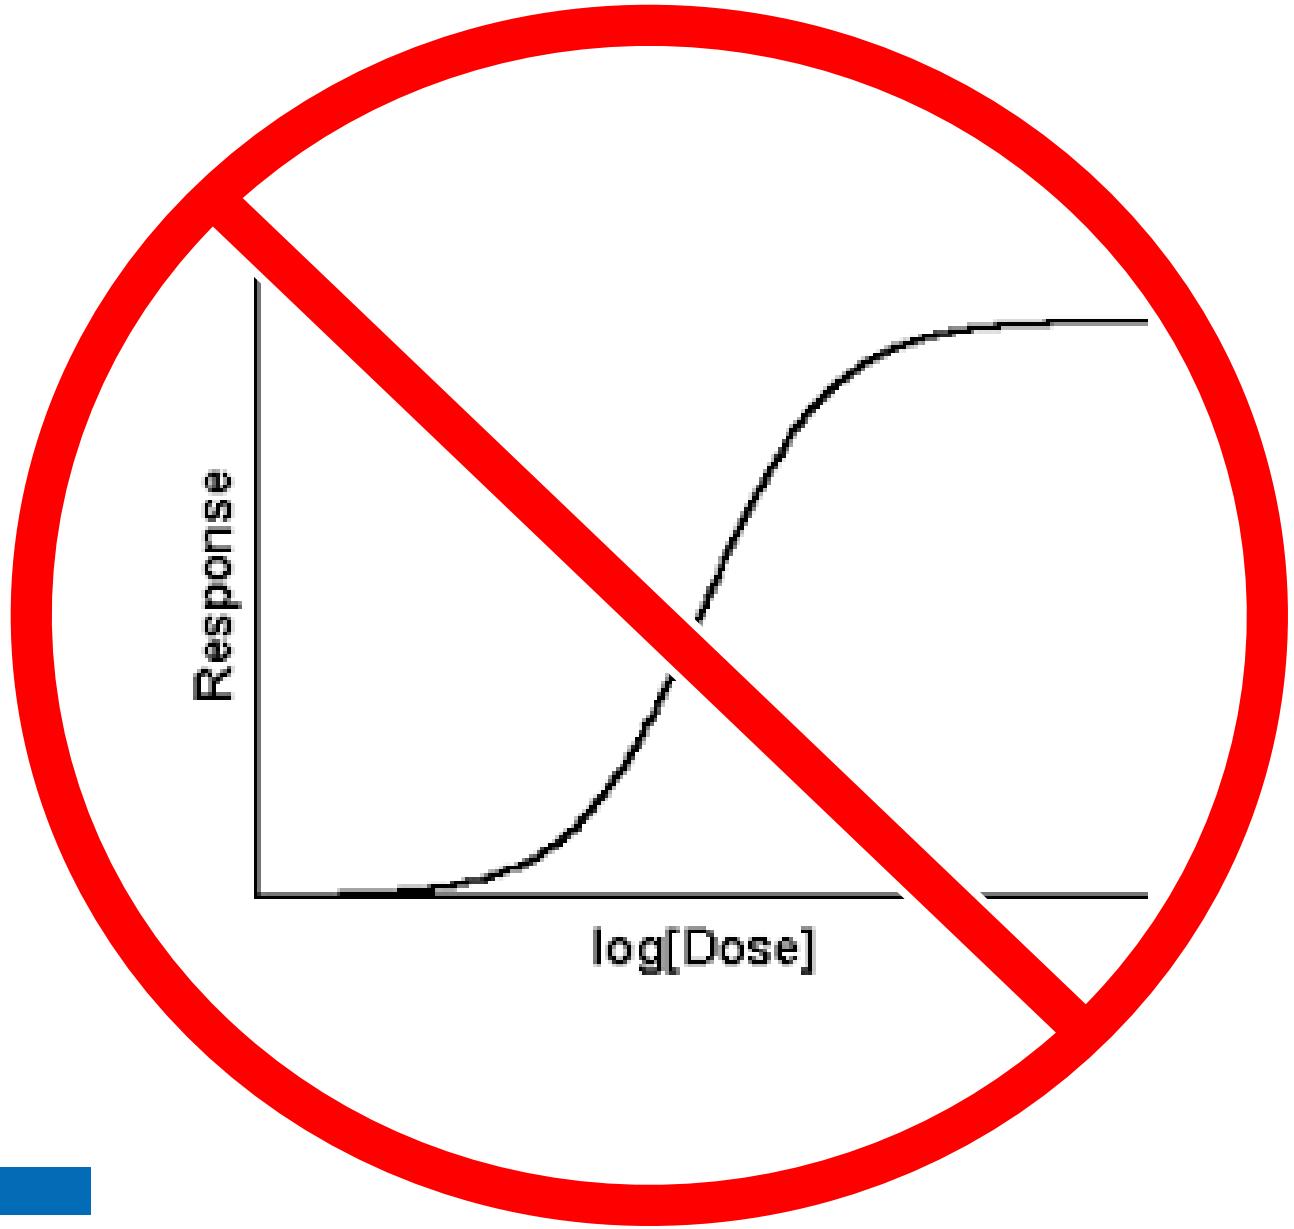


yes
yes
yes
yes
yes
yes
yes
no
yes
no

Line(s) of evidence indicate

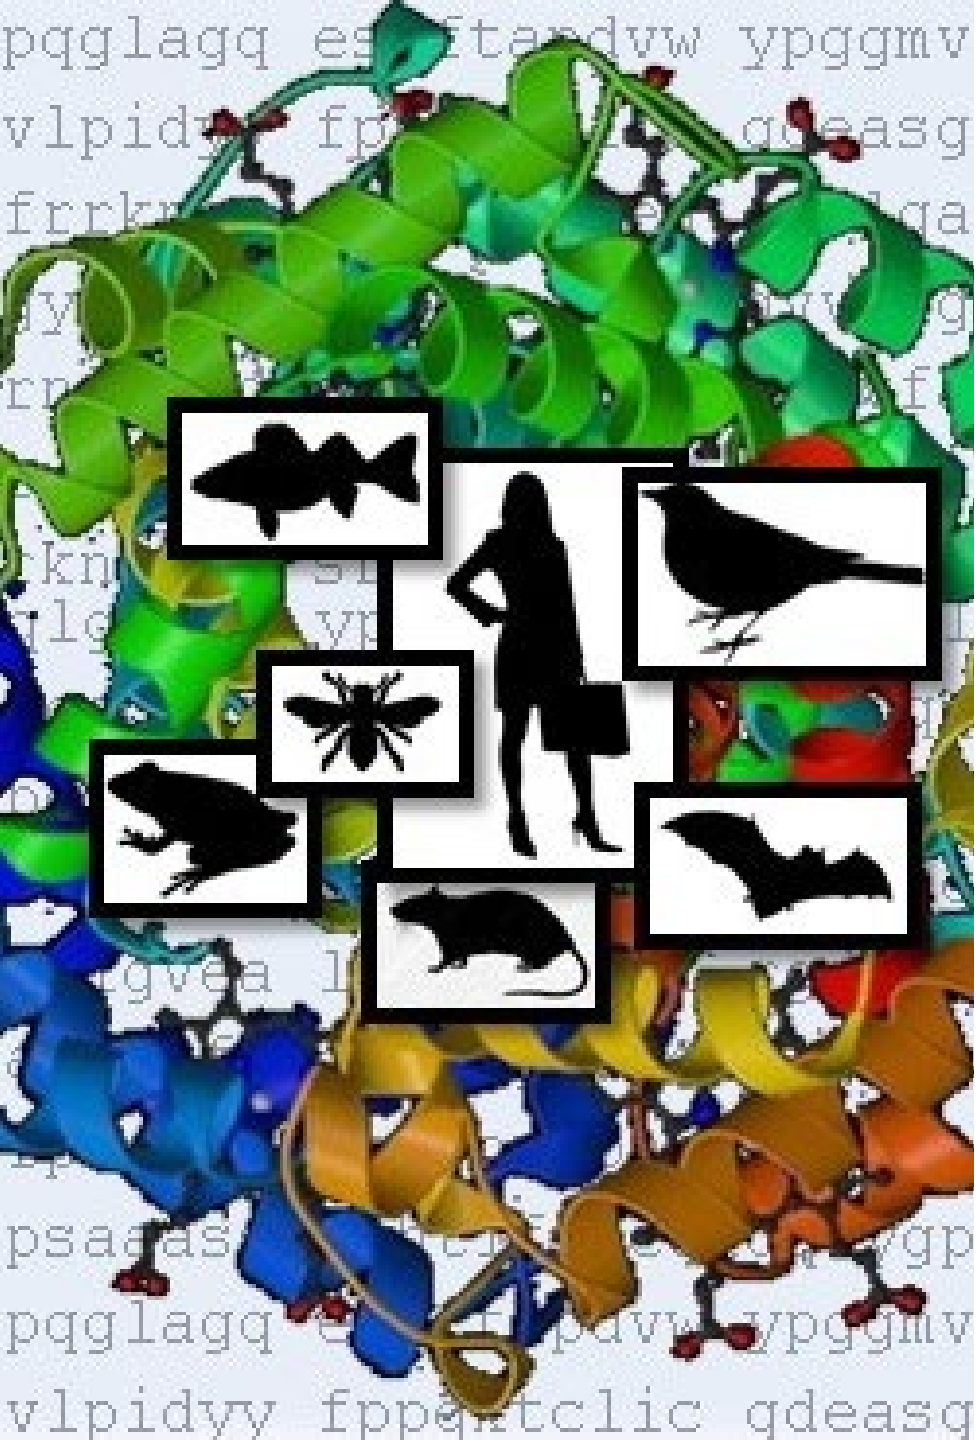
- The protein is conserved
- The protein is NOT conserved

SeqAPASS DOES NOT predict the degree of sensitivity/susceptibility:



Factors that make a species sensitive

- Exposure
- Dose
- ADME
- Target receptor availability
- Life stage
- Life history
- etc.
- etc.



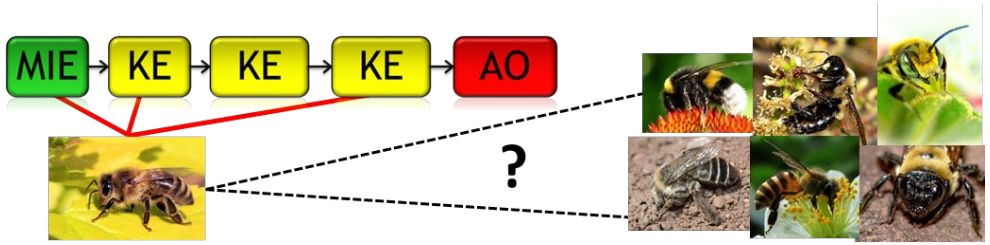
Strengths of SeqAPASS

- **Publicly available** to all
- Lines of evidence for conservation for **100s-1000s of species** rapidly
- Takes advantage of **well-established tools and databases**
- Streamlined, consistent, transparent, and published methods
  - **Case examples** to demonstrate applications
- **Guides users** to appropriate input
- **Evolves** as bioinformatics approaches become more user friendly
  - Smart automation or semi-automation

Application of SeqAPASS
MIE
KE
KE
KE
AO

Applications of Bioinformatics: Case Studies

- **Extrapolate adverse outcome pathway knowledge across species**
  - Define the taxonomic relevance: Apis vs Non-Apis bees



- **Extrapolate high throughput screening data**
  - Chemicals that target human estrogen receptor alpha, androgen receptor, steroidogenic enzymes, thyroid axis proteins
  - All ToxCast Assay targets
- **Predict relative intrinsic susceptibility**
  - Pesticides
  - Endangered Species Act
  - Derivation of Aquatic Life Criteria
- **Predict chemical bioaccumulation across species**
  - Chemicals of concern: PFAS
- **Generate research hypotheses** Strobilurin fungicides
- **Prioritization strategies** Pharmaceuticals
