

# Using Cheminformatics Approaches to Develop a Structure Searchable Database of Analytical Methods

*Antony Williams, Greg Janesch, Sakuntala Sivasupramaniam, Brian Meyer and Erik Carr*

*Center for Computational Toxicology & Exposure, U.S. Environmental Protection Agency*

April 30–  
May 3

**2023 AOCS Annual Meeting & Expo**

- The views expressed in this presentation are those of the author and do not necessarily reflect the views or policies of the U.S. EPA
- This presentation is on a proof-of-concept tool in development
  - NOT yet publicly available

- Simple Vision: I want to find the best method(s) associated with a ***chemical*** and/or **class of chemicals**
- Answer the question “I cannot find a method for my chemical” - HELP
- The Approach:
  - Aggregate MS method documents (and adjust the definition of “what is a useful method”)
  - Extract chemistry (mostly CASRN and Names)
  - Map CASRN and Names to structures
  - Deliver a proof-of-concept application to search a database by names, CASRNs, InChIKeys and ultimately structure

- People have many places to search for methods, and there is no one integration hub, except for search engines
- Search engines can return so many hits – then you filter by analytes, matrix, analytical methodology, so many synonyms and abbreviations for so many chemicals

# Synonyms, Abbreviations and Chemicals

Volume 62, April 2016, Pages 322–329

## Simultaneous analysis of twenty-six mycotoxins in durum wheat grain from Italy

The certified standards of AFB1, AFB2, AFG1, AFG2, OTA, STG, ZEN, NIV, DON, 3-AcDON, 15-AcDON, DAS, NEO, T-2 and HT-2 toxin, FB1, FB2, FB3, BEA, ENNs (A, A1, B, B1), AOH, AME, and TEN were purchased from Sigma Aldrich (Madrid, Spain).

The individual stock solutions of AFB1, AFB2, AFG1, AFG2, OTA, STG, ENs (A, A1, B, B1), BEA, AOH, AME, and TEN at 500 µg/mL were prepared in acetonitrile, whereas ZEN, FB1, FB2, FB3, NIV, DAS, NEO, DON, 3-AcDON, 15-AcDON, T-2 and HT-2 toxin were prepared at 1000 µg/mL in methanol. A working mixed standard solution at 5 and

# Introducing AMOS

## Analytical Methods and Spectra Database

- Three types of data in the database:
  - Methods (regulatory, lab manuals and SOPs, publications, tech notes)
  - Spectra (from public domain and our own laboratories)
  - Monographs (harvested from SWGDRUG and other sites)
- Some methods have associated spectra
- Some data are just ***externally*** linked
- Currently contains around 135,000 spectra, 600,000 external links, 650 monographs, and ~2000 methods
- ALL data are growing in number

- Agency-based methods
  - EPA
  - USGS
  - USDA
  - CDC
  - FDA
- Vendor application notes – Thermo, Waters, Agilent, Sciex, Shimadzu, LECO, ....
- Peer-reviewed articles
- Laboratory Documents – lab manuals, SOPs

Determination of Residues of 1,2-Dichloropropane and *cis*- and *trans*-1,3-Dichloropropene in Soil by Purge and Trap Extraction, Capillary Gas Chromatography and Mass Selective Detection

S. C. Dolder, C. E. Kubitschek and H. E. Dixon-White  
North American Environmental Chemistry Laboratory  
DowElanco  
Indianapolis, Indiana 46268 - 1053

## A. Scope

This method is applicable for the quantitative determination of residues of 1,2-dichloropropane (1,2-D) and *cis*- and *trans*-1,3-dichloropropene (1,3-D) in soil over the concentration range of 0.200-160,000 µg/kg with a validated limit of quantitation of 0.200 µg/kg for each compound.

## Determination of Fat-Soluble Vitamins in Foods Using Agilent Chem Elut S Extraction with LC/DAD and LC/MS/MS Triple-Quadrupole

Author: Hui Zhao

Focus/Analyte: Reliable sample preparation and identification/quantitation in various food matrices

Synopsis: This application note describes a method for the determination of fat-soluble vitamins, including vitamin A (retinol), vitamin D3 (cholecalciferol), vitamin D2 (ergocalciferol), and vitamin E (α-tocopherol) in complex food matrices, including infant formula, egg, canned tuna, and mushroom. Samples were saponified as sample pretreatment, extracted using Agilent Chem Elut S (Supported Liquid Extraction (SLE)) 12 mL cartridges, and fat-soluble vitamins were then simultaneously identified and quantified by an Agilent 1290 Infinity II LC coupled to an Agilent diode array detector (DAD) and Agilent 6470 triple quadrupole LC/MS in series. Data were analyzed using Agilent MassHunter workstation software.

## Standard Test Method for Determination of Polyfluorinated Compounds in Soil by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS)

**Author:** ASTM International

**Focus/Analyte:** PFAS

**Synopsis:** Determination of PFAS in soil (clay, sand, silt) by LC/MS.

1 / 24

This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

**ASTM INTERNATIONAL** Designation: D7968 – 17a

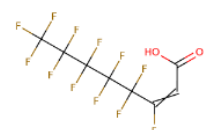

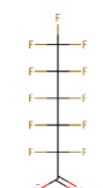

**Standard Test Method for Determination of Polyfluorinated Compounds in Soil by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS)<sup>1</sup>**

This standard is issued under the fixed designation D7968; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reappraisal. A superscript epsilon (ε) indicates an editorial change since the last revision or reappraisal.

**1. Scope**

1.1 This procedure covers the determination of selected polyfluorinated compounds (PFCs) in a soil matrix using solvent extraction, filtration, followed by liquid chromatography (LC) and detection with tandem mass spectrometry (MS/MS).

calibration standard as shown in Table 2 for the polyfluorinated compounds after taking into account a 2-g sample weight and a final extract volume of 10 mL, 50 % water/50 % MeOH with 0.1 % acetic acid. The final extract volume is assumed to be 10 mL because 10 mL of 50 % water/50 % MeOH with 0.1 %

# Searching for a chemical – CASRN, Name

## Direct structure searching coming

Compound Identifier

The table below lists methods for compounds that are similar to "DTXSID2058178".

Select a row in the table to view the method on the right half of the screen. Bolded rows refer to methods which contain the chemical being searched.

Hover over a method name to see the full text of it. The number in parentheses at the end is the number of similar compounds found in the method (not necessarily the number of compounds present in the method).

Columns can be hidden by clicking on the menu icon seen when hovering over a column name -- this brings up a menu where column visibility can be toggled.

**Synopsis:** Determination of soy isoflavones in dietary supplements, supplement ingredients, soy by LC/UV.

- It is possible we can extract chemicals from AOCS methods and structure enable the method, WITHOUT making the method itself publicly accessible – like ASTM and ISO
- Our focus right now is on mass spectrometry methods but can support many other methods

- We have built (I think) the first chemical structure indexed database of “methods”
- Methods are not just “approved methods” but also standard operating procedures, application notes, lab manuals, regulatory methods etc.
- Integrating methods to experimental spectral data will serve our non-targeted analysis efforts

# If you want to help...

- Send information regarding analytical methods and method articles to [williams.antony@epa.gov](mailto:williams.antony@epa.gov)
- If anyone is interested in a live demo I can do one in the break
